

## Urban Compost Tumbler: Product Fact Sheet

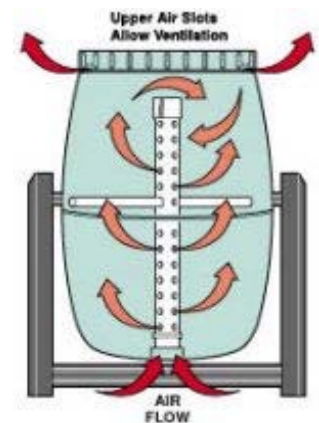

# Revolutionary Composting System Makes Compost in Weeks

*Aeration is the Secret to getting "quality" nutrient-filled compost fast.*

The Urban Compost Tumbler (UCT) fits nicely into an urban setting where people have neither the space nor the time to maintain a traditional backyard compost pile. It specifically addresses growing regulations concerning compost piles that have forced many cities to ban or consider banning the open mounds. A fully enclosed, revolutionary design keeps pests out (e.g. rats, mice, raccoons and insects), nearly eliminates odor, and is 90 percent more efficient.

There are "Four" ingredients that are critical for effective composting of all organic materials: carbon, nitrogen, water, and oxygen . The unique patented core aeration system of the UCT provides the essential oxygen for the aerobic microorganisms and tool free mixing of the composting materials.

To the right you can see the center "Aeration Tube" in the UCT. Given enough time, all composters and methods work. Given enough oxygen, they simply work better and faster. The most efficient bacteria, called "aerobes", need oxygen to do their work. Without oxygen the aerobes cannot survive and the anaerobes take over slowing decomposition by as much as 90 percent. In addition, the center aeration tube with its cross bar assists in the break up and separation of compost as it is turned preventing the materials from turning into a ball and just sliding back and forth when tumbled.

### Features and Benefits

- **EASE OF USE**
  - No Constant Turning of Compost Piles
- **PATENTED CENTRAL AERATION SYSTEM**
  - Works 90% Faster, Requires 75% Less Effort. Faster composting time that leverages oxygen.
- **LOW MAINTENANCE**
  - No cranks and rollers that clog or metal parts that rust
- **REVOLUTIONARY DESIGN**
  - Fully enclosed, elevated design eliminates odor problems

- Pest and kid proof
- Made of 100% recycled food grade plastic
- Provides insulation to aid heating of compost
- Aids in moisture control in excessively dry or rainy climates
- Portable
- 9.5 cubic foot (71 gallon)
  
- **TOOL FREE** mixing and turning of the compost materials
  
- **60-DAY GUARANTEED**
  - satisfaction or your purchase price back ... UNCONDITIONAL
  
- **10-YEAR WARRANTY**
